Aerospace Engineering

AE 172 A – Spacecraft Design I – Fall 2016

INSTRUCTOR INFO
Dr. Periklis Papadopoulos
Office: Engr. 272 E
(408) 924-7168
periklis.papadopoulos@sjsu.edu
Office Hours: TR 4:30 – 6:00 and by appointment

CREDIT
3 units

CLASS DAYS / TIME
TR 3:00 – 4:15 pm

CLASSROOM
Engr.164

PREREQUISITES
Grade “C-” or better in: AE20, AE162, AE165, Engr.100W;
Senior in good standing.

CO-REQUISITES
AE164, AE168, Engr.195A

TEXTBOOK
Instructor Notes

DESCRIPTION
This is the first course in a two-semester sequence in which
students work in teams to design a spacecraft.

More specifically, students complete the conceptual and preliminary design of a
spacecraft. Furthermore, students integrate general education (GE) student learning
outcomes into their design project. Students are challenged to think about and discuss in
class as well as in their reports, the relationship of aerospace engineering to the broader
community both in the U.S. and worldwide. This discussion include ethics, safety and
liability issues, as well as issues of identity, equality, social actions, and culture in
relationship to aerospace engineering practice.
COURSE GOALS

1. To provide senior engineering students a capstone experience in spacecraft design.
2. To offer an opportunity for going beyond a paper product (design report) into actual manufacturing and launching of microsatellites.
3. To develop students' creative abilities in solving open-ended, spacecraft design problems.
4. To develop an appreciation of the interrelationships between aerodynamics, propulsion, structures, flight mechanics, stability & control, manufacturing, maintenance, and cost in an integrated spacecraft design.
5. To develop students' engineering judgment as well as their confidence in making and accepting responsibility for design decisions.
6. To develop students' oral and written communication skills, necessary to describe the assumptions, methods, and results of engineering analysis, synthesis, and decision making associated with spacecraft design.
7. To make students aware of the importance of teamwork in the design of a spacecraft and provide them with an opportunity to develop team and leadership skills.
8. To make students aware of their professional and ethical responsibilities as practicing engineers.
9. Discuss the role of identity, equality, social actions, and culture in aerospace engineering practice. (Integration of Area S and Engineering.)

COURSE LEARNING OBJECTIVES

By the end of the course, students should be able to:

**ABET Outcome C:** Ability to perform conceptual and preliminary design of aircraft or spacecraft to meet a set of mission requirements within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability.

1. Define an appropriate set of mission requirements for a spacecraft.
2. Define, calculate, and evaluate measures of merit (MOM) for a spacecraft.
3. Perform a literature search and collect data to show the need for a particular spacecraft. *(ABET Outcome H: Recognition of the need for, and ability to engage in life-long learning.)*
4. Design spacecraft hardware.
5. Apply the complete product development cycle: basic idea / societal need / market study / economic and budget analysis.
6. Create the baseline design of a spacecraft.
7. Establish the final design of a spacecraft.
8. Evaluate / analyze the operation of a spacecraft as well as any data relayed.

**ABET Outcome D:** Ability to collaborate with people from different cultures, abilities, backgrounds, and disciplines to complete aerospace engineering projects.
9. Work harmoniously and effectively in a team to solve engineering problems related to the design of a spacecraft and to communicate the results in technical reports and oral briefings.

10. Communicate effectively in a team environment, negotiate and resolve conflicts, motivate and coach others in your team, organize and delegate work as needed, develop a team vision and set team goals, and manage resources.

11. Evaluate your own performance as well as that of your teammates using specific criteria, such as the quality of their work, their commitment to the team / project, leadership skills, responsibility, abilities, communication skills, and personality.

Project Management
12. Develop a milestone schedule (timeline) for an engineering project and follow it.

ABET Outcome F: Understanding of professional and ethical responsibility.

13. Identify possible courses of action, discuss the pros and cons of each one, and decide on the best one, given a job-related scenario that requires a decision with ethical implications.

ABET Outcome E: Ability to communicate effectively through technical reports, memos, and oral presentations as well as in small group settings.

14. Write high quality design reports (i.e., using correct language and terminology, correct technical information, and professionally prepared graphs and tables).

15. Give clear, informative, technically correct oral presentations using professionally prepared visual aids.

GE / SJSU STUDIES LEARNING OUTCOMES
Upon successful completion of this course, students will be able to:

S-LO1: Describe how identities (i.e. religious, gender, ethnic, racial, class, sexual orientation, disability, and/or age) are shaped by cultural and societal influences within contexts of equality and inequality.

ABET Outcome G: Broad education to understand current events, how they relate to aerospace engineering, as well as the impact of engineering solutions in a global and societal context.

ABET Outcome H: Recognition of the need for, and ability to engage in life-long learning.

- Engr195A – Testimony 1 (250-500 words): Discuss and provide examples of how your identities (i.e., religious, gender, ethnic, racial, class, sexual orientation, disability and/or age, among others) are shaped by cultural and societal influences within contexts of equality and inequality.
- Engr195A – Testimony 2 (250-500 words): How does language affect our identities? How do we use language and labels to authenticate our identities to others and ourselves?
• AE172A – **Reflection Paper 1** (500 words): Based upon your response to Engr195A Testimony 1, consider your identity as a future aerospace engineer. How is your identity shaped by cultural and societal influences within contexts of equality and inequality?

**S-LO2**: Describe historical, social, political, and economic processes producing diversity, equality, and structured inequalities in the U.S.

**ABET Outcome G**: Broad education to understand current events, how they relate to aerospace engineering, as well as the impact of engineering solutions in a global and societal context.

**ABET Outcome H**: Recognition of the need for, and ability to engage in life-long learning.

• Engr195A – Reflection Paper 2 (250-500 words): “Secrets of Silicon Valley”

• AE172A – **Reflection Paper 2** (500 – 750 words): Using the case studies provided in Engr195A, describe how spacecraft in general and your project in particular, fit into the historical, social, political, and economic processes producing diversity, equality, and structured inequalities in the U.S.

**S-LO3**: Describe social actions, which have led to greater equality and social justice in the U.S. (i.e. religious, gender, ethnic, racial, class, sexual orientation, disability, and/or age).

**ABET Outcome G**: Broad education to understand current events, how they relate to aerospace engineering, as well as the impact of engineering solutions in a global and societal context.

**ABET Outcome H**: Recognition of the need for, and ability to engage in life-long learning.

• Engr195A – Reflection Paper 1 (750-1250 words): Describe social actions within the borders of the United States that have led to greater equality and social justice in your life (i.e., religious, gender, ethnic, racial, class, sexual orientation, disability, and/or age). Discuss how your current or past projects have or will contribute to social justice in the United States.

• Engr195A – Reflection Paper 2 (250-500 words): In his essay, Dyson gives historical examples of technological innovations, which he claims have increased social justice. Consider the technological innovations in AE and describe another example, indicating how it has increased social justice in the U.S.

• AE172A – **Reflection Paper 3** (500 words): Consider the technological innovations in aerospace engineering in general and spacecraft design in particular, describe a historical example and indicate how it has increased social justice in the U.S. and the world.

**S-LO4**: Recognize and appreciate constructive interactions between people from different cultural, racial, and ethnic groups within the U.S.

**ABET Outcome D**: Ability to collaborate with people from different cultures, abilities, backgrounds, and disciplines to complete aerospace engineering projects.
ABET Outcome H: Recognition of the need for, and ability to engage in life-long learning.

- Engr195A Website Analysis (750 words): Organization Website Analysis Environmental and social justice issues are addressed at many different levels and in different ways by groups and organizations. This assignment addresses the broad GE learning objective of “recognizing and appreciating constructive interactions between people from different cultural, racial, and ethnic groups in the U.S.” and the specific course learning objective to “Identify, compare, and contrast how local community organizations, groups, and agencies address social issues relevant to the environment and quality of life in the Santa Clara Valley.

- AE172A – Reflection Paper 4 (500 words): Consider a negative side effect of aerospace technology: noise. Read the following articles and research the procedures regarding airplane noise in your own town or region. What civic organizations promote the reduction of airplane noise in your community? Either visit one of these groups’ websites or visit the group in person and describe the interactions between this group and the larger community. Your paper must cite your sources, including the ones listed below.

- 70% based on team performance (design reports); individual scores are determined by peer evaluations.
- 20% based on additional assignments:
  - GE Area S / ABET Outcome 3H: Reflection Papers 1, 2, 3, and 4.
  - ABET Outcome F: Case studies on safety, ethics, and liability issues: Reflection Paper on V-Tail Bonanza, Reflection Paper on AA
  - ABET Outcome G: Reflection Papers 1, 2, and 3.
  - **NB: Even if you score 100% on the technical (design) part of the course, you will NOT receive a passing grade UNLESS you also average 70% or higher on all assignments within each of the following categories:**
    1. Assignments that address ABET Outcome F
    2. Assignments that address ABET Outcome G
    3. Assignments that address Student Outcome H
    4. Assignments that address GE / SJSU Studies Area S
- 10% based on your collaboration with and mentoring of AE20 and AE30 students. In particular, you are expected to:
  - Explain your design project to AE20 / AE30 student teams assigned to you.
  - Assign simple CAD and programming tasks related to your project to each AE20 / AE30 team.
  - Be available to meet with AE20 / AE30 student teams assigned to you and provide mentoring to them as needed.

09 System / subsystems coupling.
10 **Discussion:** How spacecraft fit into the historical, social, political, and economic processes producing diversity, equality, and structured inequalities in the U.S. and the world.
11 Case study on *aircraft safety, ethics and liability issues:* V-Tail Bonanza
12 **Discussion:** Consider the technological innovations in spacecraft design, describe a historical example, and indicate how it has increased social justice in the U.S. and the world.
13 Subsystems design review.
14 Detailed design review.
15 Case study on *aircraft safety, ethics and liability issues:* The Crash of AA191
16 Final design review.

**University Policies**

*Per University Policy S16-9, university-wide policy information relevant to all courses, such as academic integrity, accommodations, etc. will be available on Office of Graduate and Undergraduate Programs’ Syllabus Information web page at http://www.sjsu.edu/gup/syllabusinfo/.*

**AE Department and SJSU policies are posted at**
