Step 1:
Check to see that the document camera and projector are connected. If you would also like to connect your computer, secure that connection.

Step 2:
Switch on the projector and press the power button on the document camera.

Step 3:
Place the content to be projected on the document camera. To use the document camera like a transparency projector, you must turn on the Lamp (backlight).

* See the folder for additional features: The document camera can also zoom in and out, spotlight and mask content, freeze an image, take photos, record video, connect to a microscope, connect to a laptop, connect a flash drive, and connect a mouse for digital annotations.
