Course Description

Macroeconomics is the study of the behavior of economic agents such as households, firms and governments, whose collective decisions determine how resources are allocated in a free market economy. The goal of the course is to teach you to "think like an economist," which will help you to understand the world around you. The course presents the economic theory such as opportunity cost, supply, demand, markets, international trade, gross national product, unemployment... nevertheless it will emphasize the application of these concepts to real world situations through in-class discussions of current events, videos, newspapers articles and interactive learning exercises. Those tools will be formulated to better understand and analyze the economic, political, social world surrounding us and to formulate policy implications.
