

HS 267D Session 5

- 1) I graded **exams**. *Thank you for your cooperation*. I know this was an extremely stressful way to take the exam, but so far results look good. Sorry about the technical problems some of you encountered, i.e., being kicked off Bb. It seems as if everything that could go wrong, went wrong (Murphy's Law). Review the exam may provide some valuable lessons.
- 2) We are skipping the **rest of Chapter 18** (test for trend, case-control ORs, matched pairs) and proceed to Ch 19.
- 3) We are covering **Ch 19** to cover confounding and interaction (important *public health* concepts).
- 4) HW
 - a) Read pp. 465 – 470 & 474 – 476. Attend to definitions and examples; ignore formulas; let WinPEPI do calculations; focus on RR statistics.
 - b) Lab 5.
 - c) Exercises 19.1, 19.2, 19.3, 19.6. Use WinPEPI for Mantel-Haenszel and interaction statistics. Interpret results; connect to definitions of confounding & adjustment.
