## Parameters Studied in HS267

| Unit                  | Parameter   | Estimator                               | Derivation                 |
|-----------------------|---|---|----------------------------|
| Cohort Studies        | RR (relative risk)                                      | ŔR                                      | ratio of two "rates"       |
| Case-Control Studies  | OR (odds ratio)   | ÔR                                      | ratio of two exposure odds |
| Inference on Variance | $\sigma^2$ (variance)                                   | $s^2$                                   | mean sum of squares        |
|                       | $\sigma_{1}^{2} / \sigma_{2}^{2}$                       | $s_{1}^{2}/s_{2}^{2}$                   | ratio of two variances     |
|                       | $\mu_1$ - $\mu_2$ (mean difference)                     | $\overline{x}_1 - \overline{x}_2$       | mean difference            |
| ANOVA                 | $\sigma_{\mathrm{B}}^{2}$ / $\sigma_{\mathrm{W}}^{2}$ § | $s_{\mathrm{B}}^{2}/s_{\mathrm{W}}^{2}$ | ANOVA F statistic          |
|                       | $\mu_i$ - $\mu_j$                                       | $\overline{X}_i - \overline{X}_j$       | Post-hoc comparisons       |
| Correlation           | $\rho$ (correlation coefficient)                        | r                                       | Sum of cross-products      |
| Regression            | $\beta$ (slope)   | b                                       | Least squares line         |

## Additional notation:

n = group size

N = total sample size

 $\alpha = type \; I \; error \; rate$ 

 $\alpha_B$  = alpha adjusted according to Bonferroni's method

1 -  $\beta$  = probability of type II avoidance

p [value] = probability of current data assuming null hypothesis were true

p =population proportion (Binomial Parameter)

## Graphical help:

Side-by-side boxplot - comparison of means and variances

Scatter plot - correlation and regression

<sup>§</sup> Used to test inequality of means in the population.
