Computational Public Health Statistics (HS267)

Spring 2009 (Campus)
San Jose State University
Department of Health Science

Description: Methods of public health and biostatistical data collection, management, analysis and reporting using microcomputers, including the detection and control of confounding factors.

Prerequisite: HS 167 or instructor consent.

my.sjsu.edu no. 20813

Class meetings: Thursdays from 3:00 to 5:45 in MH 321. Some labs may require additional time and may be completed at home or in MH 332 during open hours: see http://www.casa.sjsu.edu/openhours.asp

Website: www.sjsu.edu/faculty/gerstman/hs267

Office hours: Saturdays from 11:00am – noon on Elluminate.

Final Exam: Thursday, May 21, 2009, 2:45 to 5:00

Professor: Bud Gerstman. Class correspondence should come through the Bb e-mail tool, when feasible. When this is not feasible, please use B.B.Gerstman@sjsu.edu.

Calculator: TI-30XIIS or 83

Software: SPSS (any version) and WinPepi (public domain).

The course schedule and assignments are posted on the course website.

Learning objectives

We cover inference for a proportion (Ch 16), two sample inferences for proportions including measures of effect based on cohort and case-control samples (Ch 17 & Ch 18), stratified analysis, including the consideration of confounding and interaction (Ch 19), correlation and regression, including multiple regression (Ch 14 & Ch 15), and reporting standards for lay and professional audiences (several sources).

General objectives

The following objectives meet CEPH accreditation expectations. Asterisks (*) indicate content introduced in pre-req course or biostat tutorial:

1. Describe the roles biostatistics serves in public health.*
2. Identify principles of measurement and study design, with application to public health research.*
3. Apply descriptive and inferential statistical techniques according to the type of study design, for answering particular research questions.*
4. Describe basic concepts of probability, random variation, and commonly used statistical probability distributions.*
5. Distinguish different measurement scales, and implications for selection of statistical methods.
6. Demonstrate reliable data management using EpiData, SPSS, and other statistical software. [Apply basics techniques with vital statistics and public health records in the description of public health characteristics and public health research and evaluation.]

7. Apply descriptive techniques to summarize public health data. Explore and describe data using summary statistics, frequency tables, and exploratory plots.

9. Identify appropriateness of statistical methods based on validity and distributional assumptions. Describe methodological alternatives to commonly used statistical methods when assumptions are not met.

10. Interpret results of statistical analyses found in public health studies.

11. Apply statistical methods in examples drawn from public health practice. Develop written and oral presentations based on statistical analyses for public health professionals and educated lay audiences.

Course Organization

- A class of this type typically involves 2 hours of lecture per week, 2 hours of lab per week time, and 4 hours of outside study, including homework exercises.
- Units begin on Thursdays. It is essential to stay current and to not fall behind.
- Labs must be completed within 2 days of assignment. Otherwise, retention will be diminished.
- You are expected to check the Blackboard site every other day daily and keep current on items posted to the discussion board. You are expected to seek clarification using discussion threads as soon as an issue arises.

Rules for independent work*

Unless stated otherwise, graded work in this course is to be entirely your own. In some instances in the past, students have gone beyond permissible collaboration and suffered serious consequences. When anyone breaks these rules, the entire class suffers. The belief that others are not obeying the rules erodes confidence and introduces anxieties that those who do follow the rules will be disadvantaged. Having to investigate possible cheating incidents takes instructor time away from helping students learn the material and erodes confidence.

Unless stated otherwise in writing, the rules for independent work and collaboration are:

1. **Exams and quizzes:** You may not use published (print or web) materials other than those items expressly permitted in written form when working on exams and quizzes. Many not communicate about the examination materials, even indirectly, with anyone other than an instructor.

2. **Labs.** You may collaborate freely on labs.

3. **Homework exercises:** You may use published (print or web) materials but may not communicate about homework exercises EXCEPT via public discussion boards under the instructor’s supervision mark open to all students.

4. **Reports (if any):** You may use published (print or web) materials when working on reports. You may consult with experts on specific issues but you must write your report entirely by

* Based partially on materials provided by UNC Professor Vic Schoenbach.
yourself. Information received from any expert must be properly cited and must constitute no more the 25% of the paper’s content.

Why do we devote so much attention to the rules and ethics for collaborating on course work? Despite the fact that intellectual honesty is essential to learning, cheating, plagiarism, and other forms of academic dishonesty are widespread in schools and universities. For example, a recent article (“Fuqua students may face expulsion”, Durham Herald-Sun, 4/28/2007, A1,A4) reported on 37 Duke business students accused of cheating on a take-home exam. The article also mentioned a Center for Academic Integrity 2002-2004 survey of American MBA students in which 56% reported having cheated. As unpleasant as this seems, plagiarism and cheating are common in higher education.

Academic Integrity†

“Your own commitment to learning, as evidenced by your enrollment at San Jose State University, and the University’s Academic Integrity Policy requires you to be honest in all your academic courses. Faculty are required to report all infractions to the office of Judicial Affairs.” The SJSU policy on academic integrity can be found at www2.sjsu.edu/senate/S04-12.htm

Disability

If you need course adaptations or accommodations because of disability, or if you need special arrangements in case the building must be evacuated, please make an appointment with me as soon as possible or see me during office hours. Presidential Directive 97-03 requires that students with disabilities register with DRC to establish a record of their disability.

University Drop Policy

Please see the Schedule of Classes for details about drop procedures.

Grades

Your course grade is based on your average homework, midterm, and final exam score, with grade cutoffs as follows:

<table>
<thead>
<tr>
<th>Grade</th>
<th>Percentage</th>
</tr>
</thead>
<tbody>
<tr>
<td>A+</td>
<td>100–97%</td>
</tr>
<tr>
<td>B+</td>
<td>96–93%</td>
</tr>
<tr>
<td>C+</td>
<td>92–90%</td>
</tr>
<tr>
<td>D+</td>
<td>89–87%</td>
</tr>
<tr>
<td>D</td>
<td>86–83%</td>
</tr>
<tr>
<td>D−</td>
<td>82–80%</td>
</tr>
<tr>
<td>F</td>
<td>Below 60%</td>
</tr>
</tbody>
</table>
