

Overview

The SJSU Premier Wi-Fi service transmits your data across a secure, encrypted connection. This ensures that your data will not be compromised as it is transmitted wirelessly through the air from your computer to the network.

The San José State Premier Wi-Fi Service uses WPA2 Enterprise (Wi-Fi Protected Access) technology that causes all data to be securely encrypted while traveling through the wireless network. We strongly recommend the use of the SJSU Premier Wi-Fi service for all wireless network transactions.

Note: Windows XP and earlier are not supported

Windows Configuration Instructions

This guide demonstrates how to configure Windows for SJSU Premiere Wi-Fi services.

1. Enable Wireless on your laptop.

Note: This step is performed in various ways depending on the model of laptop you're using. Often, it is a button or switch on the outside of the laptop. Refer to your owner's manual for specific instructions.

2. Click the Network Connection icon  in the Taskbar.
3. Select SJSU_premier Wireless Network, and then click Connect.

The Network Authentication window displays.

4. Enter requested information:
 - User Name: Enter your SJSUOne ID.
 - Password: Enter your SJSUOne password.

5. Click the OK button.
6. If necessary, click through any messages regarding certificates by clicking on Connect.

Your computer is now connected to the SJSU Campus wireless network via the SJSU Premier Wi-Fi service.
