Gender Affirming Care Services at the Student Health Center (SHC)

The Student Health Center offers hormonal treatment for trans-female and gender-fluid students interested in feminizing therapy. Masculinizing therapy is not currently being offered, but the SHC anticipates providing this type of treatment in 2019.

Students who have transitioned, or begun transitioning outside of the SHC may transfer their care to the SHC. To do so, the student’s medical records related to gender affirming care will need to be sent to the Student Health Center for review. These records should include counseling visits related to transitioning, initial and most recent medical visits, as well as lab tests related to treatment and information regarding prescription dosages. Once the medical records have been reviewed, if the student is eligible for prescription therapy for gender affirming care at the SHC, the student will be contacted by the SHC to schedule an appointment.
