Gender Affirming Services at the SJSU Student Health Center

The Student Wellness Center offers hormonal treatment for trans-female, trans-male and non-binary students interested in hormonal therapy. Students interested in initiating treatment should schedule an appointment for evaluation, either in person or by calling appointment services; **online appointments are not available for this type of appointment.** Initiation of hormone therapy is not done on the initial evaluation, and a letter of support from a counselor is required prior to starting treatment.

Students who have completed the transition process, or begun transitioning outside of the Student Health Center may request to transfer care to the health center. To do so, an appointment should be scheduled for evaluation; appointments for transfer of care can be made in person at the first floor scheduling desk, or by calling appointment services. **This type of appointment cannot be booked online.** Records of prior treatment will be requested. There could be circumstances where the Student Health Center may be unable to accept transfer of care if the treatment is beyond the provider’s scope of practice.

**Please note:** due to limited staffing, the Student Health Center is unable to provide long-term injection services for students taking masculinizing therapy. It is the goal of the Student Health Center to provide students the support, education and skills for them to become self-sufficient and independent with self-injection.
