

Please complete this form for each critical-list Web page you evaluated and/or repaired.

Web page URL:

For this Web page, what were the top three accessibility issues you addressed, and how much time and effort did you spend on resolving them?

Issue 1 Did fixing this issue also fix other pages?
Time spent Difficulty

Issue 2 Did fixing this issue also fix other pages?
Time spent Difficulty

Issue 3 Did fixing this issue also fix other pages?
Time spent Difficulty

What is the estimated time and effort required to completely fix your entire Website for accessibility?

Time (person-weeks) Difficulty

Will you need additional assistance from any of the following in order to completely fix your Website?

Type of assistance: Other:

Estimated cost associated with assistance:

What future workshops might you be interested in attending regarding creating accessible documents?

Microsoft Word Microsoft Powerpoint PDF Creation

HTML Basics

Accessible Web forms

Other:

Are you using a content management system to manage your Website?

Yes

No

If yes, which one?

Please answer the following questions in the spaces provided.

What key lessons were learned, techniques developed, or other generalizable repair practices (technical or organizational) were developed?

1) How to properly use heading semantics to organize your page in order so that clients with a disability can quickly recognize how your page is structured.
2) It is better to move away from using image mapping as it causes issues with alternative text not displaying properly or at all for screen readers.
3) How to properly test for color contrast and what tools to use as well as what different types of tests there are.
4) Your document should be tested for linearity as many text readers

For pages or problems that cannot be fixed immediately, what current actions (technical or organizational) are planned to provide equally effective access to the page content?

During the redesign of our site, navigation bars utilizing images instead of css standards will be removed. This will allow for easier updating of errors or changes to the navigation bar as well as allow users with visual impairments to increase the size of text.

For pages or problems that cannot be fixed immediately, how will a long-term fix be accomplished, who will need to do it (for example, a product vendor), and what is your estimated time and cost of repair or replacement?

Implementation of a CMS system along with standard procedures, templates and coding will be implemented by the September 1st deadline. Templates will be rigorously tested for ADA and Section 508 compliance.

We will also obtain consultation from a web developing expert to speed up the process of redesign.
