

San José State University
College of Engineering, Department of Aerospace Engineering
AE168-02: Aerospace Vehicle Dynamics and Control, Fall 2021

Course and Contact Information

Instructor:	Professor Long Lu
Email:	Long.Lu@sjsu.edu
Office Hours:	Tuesday and Thursday 9:30 AM-10:30 AM (Online via Zoom)
Class Times and Location:	Lecture: Tuesday and Thursday 4 PM- 4:50 PM on Zoom Lab: Tuesday and Thursday 6 PM- 8:50 PM at ENG 164
Prerequisites:	AE 140, AE 157, AE 165 and Math 129A with a grade of 'C-' or better in each

Course Description:

Aircraft/spacecraft dynamics, stability and control. Linearization and Euler transformations. Eigenvalues and eigenvectors. State space and transfer function analysis of dynamics of aerospace vehicles. Feedback control design and synthesis using advanced control techniques. Aerospace dynamics and control laboratory experiments.

Course Materials and Format

Zoom meeting links and course materials such as the syllabus, assignments and solutions, lecture notes... will be available on our class Canvas site. Students will also use Canvas to submit assignments and exams. Students are responsible for regularly checking Canvas to learn of any updates and announcements. For help with using Canvas, please see [Canvas Student Resources page](#).

Course Goals

Introduce students to:

1. the review of aircraft static stability
2. the development of aircraft dynamic stability concepts
3. the understanding of aircraft motion
4. the development of the means to control aircraft motion
5. the principles of automatic feedback control for aircraft
6. the derivation of spacecraft equations of motion
7. the design of passive and active spacecraft control methods
8. aerospace dynamics and control experiments.

Course Learning Outcomes (CLO)

Upon successful completion of this course, students should be able to:

1. Understand the standard conventions and notation for rigid body aircraft dynamics and control
2. Understand the principles of aircraft static stability
3. Represent orientation using Euler angles
4. Derive rigid body equations of motion and develop a linearized form of these equations
5. Develop perturbation equations for six degree-of-freedom motion of an aerospace vehicle
6. Define stability and control dimensional derivatives and their physical meanings
7. Estimate lateral and longitudinal stability derivatives from aircraft geometry
8. Understand why deflecting ailerons produces a yawing moment
9. Derive expressions for aircraft control surface effectiveness
10. Develop the principles of aircraft dynamic stability
11. Understand and apply the principles of feedback control
12. Learn the fundamentals of feedback loop architecture
13. Determine the natural frequencies and damping ratios of short period and phugoid modes
14. Derive short period and phugoid approximations
15. Develop spiral, roll, and Dutch roll approximations
16. Derive system transfer functions and plot its time responses
17. Design closed-loop control systems for rate damping, attitude and altitude control
18. Understand and apply the fundamentals of system identification
19. Derive the equations of motion for a spacecraft
20. Understand passive spacecraft control methods such as gravity gradient stabilization
21. Understand active spacecraft control methods such as momentum wheels and thrusters
22. Design a spacecraft attitude feedback control system
23. Utilize modern tools such as MATLAB and Simulink for designing aircraft and spacecraft control systems and analyzing their performance.
24. Work effectively in teams to design and conduct laboratory experiments to study the stability and control of aerospace systems
25. Work effectively in teams to design and conduct a course project to analyze the stability and to design automatic control systems to augment the stability and performance of an aircraft or spacecraft.

Course Relationship to BSAE Program Outcomes

CLOs	BSAE Program Outcomes						
	1	2	3	4	5	6	7
1 -23	++		O	O			++
24 -25	++	O	+++	O	+++	+++	+++

- +: Skill level 1 or 2 in Bloom's Taxonomy
 ++: Skill level 3 or 4 in Bloom's Taxonomy
 +++: Skill level 5 or 6 in Bloom's Taxonomy
 O: Skill addressed but not assessed

Required Texts/Readings

Required Textbook

Aerospace Vehicle Dynamics and Control Course Reader by Professor Jeanine Hunter. This course reader is available at Maple Press, 330 S 10th St #200, San Jose, CA 95112. Also available for online order at <https://maplepress.net/readers/product-tag/fall2021/>.

Other Readings

- [1] Nelson, R. C. Flight Stability and Automatic Control.
- [2] Roskam, J. Airplane Flight Dynamics and Automatic Flight Controls-Parts I and II.
- [3] Cook, M. V. Flight Dynamics Principles.
- [4] Anderson, J. D. Introduction to Flight.
- [5] Ogata, K. Modern Control Engineering.
- [6] Nise, N. S. Control Systems Engineering.

Grading Information

1. All examinations must be taken in order to receive a passing grade.
2. No make-up examinations will be granted without a valid reason and proof.
3. Late assignment submissions will not be accepted.
4. Homework assignments will be posted to Canvas and due to Canvas (using Canvas assignment submission) by the announced due dates. Please remember to check Canvas for important class announcements. For analytical problems, please remember to type or scan your work and save it as a PDF file. For computational problems, please remember to publish all MATLAB-Simulink programs to a PDF file. Please then combine the PDF files of your analytical and computational parts into one PDF file and submit it to Canvas.
5. Homework assignments are individual-effort assignments. Students are encouraged to have intellectual discussions about the homework problems. However, all students must prepare and submit their own solutions to the homework problems which reflect their understanding and problem-solving methodologies. Any form of cheating or plagiarism such as copied/shared solutions or code will not be tolerated.
6. Lab assignments and the course project are team-effort assignments. All team members will share the same scores of the team-effort assignments. Therefore, please make sure to be professional, work effectively, and contribute evenly to the team efforts.

Grading:

Homework Assignments:	200 points
Laboratory Reports:	200 points
Examination 1:	200 points
Examination 2:	200 points
Course Project:	200 points

Total:	1000 points

Letter Grade Determination:

Total \geq 950 points: A+
Total \geq 900 points: A
Total \geq 850 points: A-
Total \geq 800 points: B+
Total \geq 750 points: B
Total \geq 700 points: B-

Total \geq 670 points: C+
Total \geq 650 points: C
Total \geq 630 points: C-
Total \geq 600 points: D
Total $<$ 600 points: F

University Policies

- Per University Policy S16-9, university-wide policy information relevant to all courses, such as academic integrity, accommodations, etc. will be available on Office of Graduate and Undergraduate Programs' Syllabus Information web page at <http://www.sjsu.edu/gup/syllabusinfo>.
- AE Department and SJSU policies are also posted at <http://www.sjsu.edu/ae/programs/policies>

AE 168-02: Aerospace Vehicle Dynamics and Control, Fall 2021 Approximate Course Schedule

Week/Dates	Discussions Topics/Activities
Week 1	Welcome to AE 168-02!
Week 2 T 08/24 & Th 08/26	Class Orientation, Syllabus Discussion Rigid Body Notation for Aircraft Dynamics and Control
Week 3 T 08/31 & Th 09/02	Linearizing the Equations of Motion of an Aerospace Vehicle
Week 4 T 09/07 & Th 09/09	Dimensional Stability and Control Derivatives
Week 5 T 09/14 & Th 09/16	Aircraft Static Stability
Week 6 T 09/21 & Th 09/23	Aircraft Control Surface Effectiveness
Week 7 T 09/28 & Th 09/30	Aircraft Dynamic Stability
Week 8 T 10/05 & Th 10/07	Review of Classical and Modern Control Methods
Week 9 T 10/12 & Th 10/14	Exam 1 Review on Tue 10/12/2021 Exam 1 on Thu 10/14/2021
Week 10 T 10/19 & Th 10/21	Aircraft Longitudinal Open-Loop Dynamics and Feedback Control
Week 11 T 10/26 & Th 10/28	Aircraft Lateral/Directional Open-Loop Dynamics and Feedback Control
Week 12 T 11/02 & Th 11/04	Fundamentals of Systems Identification, Spacecraft Equations of Motion
Week 13 T 11/09 & Th 11/11	Gravity Gradient Stabilization No class on Thu 11/11/2021 (Veteran's Day)
Week 14 T 11/16 & Th 11/18	Spacecraft Attitude Control Using Reaction Wheels and Thrusters

Week 15 T 11/23 & Th 11/25	Feedback Control of Spacecraft Pitch Attitude No class on Thu 11/25/2021 (Thanksgiving Holiday)
Week 16 T 11/30 & Th 12/02	Exam 2 Review on Tue 11/30/2021 Exam 2 on Thu 12/02/2021
Week 17 Th 12/09	Course project reports and code folders are due to Canvas by 11:59 PM on Thu 12/09/2021.
