

SJSU | DEPARTMENT OF ECONOMICS

One Unit Statistics Lab (ECON 180) Policy for Waiving

Feb, 15, 2017

ECON 180 Stats Lab Policy:

Economics 3 is a four-unit class in Introductory Statistics and Probability Theory, consisting of three units lecture and one unit computer lab. Majors may substitute a statistics class from another institution or another course on campus to cover the three units of the course but may not count this toward the computer lab. In place of the one unit computer lab component, students may take a one unit independent study (ECON 180) to complete the computer projects or can waive the requirement by taking ECON 103 (and earning at least a grade of C). Students taking ECON 103 will need to submit a substitution/waiver form to be signed by an advisor and the department chair. The requirement will not be waived until a grade in ECON 103 has been awarded.

(Please note: While this class can be waived as a requirement for fulfilling the major, you can not waive the total number of units (120) needed for graduation as required by the university.)
