

SAN JOSE STATE UNIVERSITY
Mechanical Engineering Department

ME 154 - Mechanical Engineering Design

Fall 2019

Instructor: Dr. Ken Youssefi

Office: E-137, phone: (408) 924-4142

Class room: E303

Office hrs : M 2:30-4:00, W 9:00-10:00

Class time: Lecture - MW 10:30 - 12:10

email : kyoussefi@aol.com

Class code: 42261 (section 1)

Final Exam: Thursday Dec. 12, 9:45 - 12:00

Course website: [Canvas](#)

COURSE OBJECTIVE:

Introduction to Mechanisms design and analysis. Graphical and analytical synthesis of mechanisms, path, motion, and function generation mechanisms. Complex polar notation and closed loop vector equations to analyze mechanisms. Position, velocity, acceleration and force analyses. Application of statics, dynamics, strength of materials, static failure theories and fatigue failure theory to the design of machine components. Threaded fasteners and the design of bolted joints. The course will include a term project that involves the design and fabrication of a mechanical device. Lecture 4 hours.

Success in this course is based on the expectation that students will spend, for each unit of credit, a minimum of forty-five hours over the length of the course (normally 3 hours per unit per week with 1 of the hours used for lecture for instruction or preparation/studying or course related activities including but not limited to internships, labs, clinical practical. Other course structures will have equivalent workload expectations as described in the syllabus.

Prerequisites: ME20, C- or better in ME101 and CE112, CAD knowledge is strongly recommended. **You must turn in an unofficial transcript with the prerequisites highlighted by the second class period, or you will be dropped from the class.**

Required Text: R.L. Norton, "Machine Design", 5th edition, Prentice Hall, 2014 (MD)

Recommended Text: R. L. Norton, "Design of Machinery; Introduction to Synthesis and Analysis of Mechanisms" 5th edition, McGraw-Hill Inc. 2012 (DOM) or the custom version available at the bookstore.

Group design project - see handout for details

Grading: Homework 10%, Project 25%, Midterm Exams 20% each, Final Exam 25%

Final course grade is determined using a normal distribution curve (\pm grades will be assigned):

Grade distribution	Grade A	average plus one standard deviation and higher
	Grade B	average plus $\frac{1}{2}$ standard deviation
	Grade C+	average
	Grade C-	average minus $\frac{1}{2}$ standard deviation
	Grade F	average minus one standard deviation and lower

Academic Integrity: Your commitment, as a student, to learning is evidenced by your enrollment at San Jose State University. The [University Academic Integrity Policy S07-2](http://www.sjsu.edu/senate/docs/S07-2.pdf) at <http://www.sjsu.edu/senate/docs/S07-2.pdf> requires you to be honest in all your academic course work. Faculty members are required to report all infractions to the office of Student Conduct and Ethical Development. The [Student Conduct and Ethical Development website](http://www.sjsu.edu/studentconduct/) is available at <http://www.sjsu.edu/studentconduct/>.

Campus policy in compliance with the Americans with Disabilities Act: If you need course adaptations or accommodations because of a disability, or if you need to make special arrangements in case the building must be evacuated, please make an appointment with me as soon as possible, or see me during office hours. [Presidential Directive 97-03](http://www.sjsu.edu/president/docs/directives/PD_1997-03.pdf) at http://www.sjsu.edu/president/docs/directives/PD_1997-03.pdf requires that students with disabilities requesting accommodations must register with the [Accessible Education Center](#) (AEC) at <http://www.sjsu.edu/aec> to establish a record of their disability.

Dropping and Adding

Students are responsible for understanding the policies and procedures about add/drop, grade forgiveness, etc. Refer to the current semester's [Catalog Policies](http://info.sjsu.edu/static/catalog/policies.html) section at <http://info.sjsu.edu/static/catalog/policies.html>. Add/drop deadlines can be found on the current academic year calendars document on the [Academic Calendars webpage](http://www.sjsu.edu/provost/services/academic_calendars/) at http://www.sjsu.edu/provost/services/academic_calendars/. The [Late Drop Policy](http://www.sjsu.edu/aars/policies/latedrops/policy/) is available at <http://www.sjsu.edu/aars/policies/latedrops/policy/>. Students should be aware of the current deadlines and penalties for dropping classes.

Course Goals

1. To design a mechanism to perform a desired task using different techniques.
2. To learn failure criterion to design components guarding against yielding, fracture and fatigue failures
3. To learn to work as a team to design and simulate a mechanical device using CAD,.

Student Learning Objectives

1. Apply the concept of kinematic pairs (joints) and to determine the number of degrees of freedom for a given mechanism.
2. Identify the different types of four-bar mechanisms and their classifications.
3. Identify the toggle positions and determine the minimum transmission angle and mechanical advantage of a given mechanism.
4. Synthesize a four-bar mechanism using graphical and analytical methods for a given path, motion, or function generation task.
5. Perform a kinematic analysis of a mechanism to determine position, velocity, and acceleration of all members.
6. Perform a kinetic analysis of a mechanism to determine the forces on all joints and the torque required to drive the mechanism.
7. Determine the magnitude and the location of the maximum stress (principal stress, maximum shear stress, and von Mises stress) on a component.
8. Design and analyze short and long columns.
9. Design and analyze thin and thick-walled cylinders, proper interference fits for press and shrink fits.
10. Design and analyze ductile and brittle machine components under static loads using appropriate failure criterion.
11. Identify the type of discontinuity in a cross sectional area of a machine component and estimate the appropriate value for the stress concentration factor.
12. Design and analyze machine components under cyclic loading to guard against fatigue failure.
13. Design bolted joints in tension and shear.
14. Work as a member of a design team to achieve the project goals
15. Learn how to perform motion analysis using CAD

COURSE SCHEDULE

Week/Date	Subject	Reading Assign.(ch.)	Homework Assign.
1	8/21	Enrollment, course organization and design project discussion	
2	8/26	Introduction to mechanisms, linkages, degree of freedom, (1,2) DOM	
	8/28	Kinematics pairs, 4-Bar mechanism and classification (2) DOM List of group members due date	
3	9/2	Holiday – Labor Day	
	9/4	Graphical synthesis: Mechanical advantage, toggle positions, (3) DOM Motion generation mechanism (2 and 3 positions), adding Dyad Graphical synthesis; Path generation mechanism (3 position) Synthesis (path gen. mech.) with prescribed timing, design of a Quick-return mechanism	Homework #1 Degrees of freedom Due Wed. Sept. 4
4	9/9	Analytical synthesis; Complex polar notation, Closed loop vector eq.	
	9/11	Motion generation mechanisms (two to five position), (4,5) DOM Introduction to CAD animation and motion analysis	Homework #2 Graphical synthesis Due Wed. Sept. 11
5	9/16	Analytical synthesis; Function & path generation mech. (4,5) DOM	
	9/18	Analytical analysis; Position, Velocity and Acceleration. (6,7) DOM Example problems. Project proposal due date (9/18)	Homework #3 Analytical synthesis Due Wed. Sept. 18
6	9/23	Forces on mechanisms; Matrix method (11) DOM	
	9/25	Graphical method, Project discussion, Example problems Project specification due date (9/25)	Homework #4 Analytical analysis Due Wed. Sept. 25
7	9/30	Review of stress & strain, Principal stresses. (4) MD Exam review	
	10/2	Exam 1, Wed. Oct. 2, covers materials on mechanism design and synthesis (DOM)	
8	10/7	Review of combined stresses; axial, bending, torsion. (4) MD	
	10/9	Review of column design.	
9	10/14	Design of thin & thick walled cylinders. (4) MD	
	10/16	Material selection for design (2, notes)	Homework #5 Force analysis Due Wed. Oct. 16
		Design Review, all week	
10	10/21	Failure theories for static loads; (5) MD Maximum shear stress theory, The distortion-energy theory.	
	10/23	Modified Coulomb-Mohr theory (brittle materials).	
11	10/28	The concept of stress concentration (4,6) MD	
	10/30	Failure theory for cyclic loads - Fatigue High cycle fatigue; S-N curve.	Homework #6 Static failure, cylinder Due Wed. Oct. 30
12	11/4	Effect of mean stress on fatigue life (Modified Goodman Diagram) (6) MD	
	11/6	Combined stresses, Fatigue problems	
13	11/11	Holiday – Veteran’s Day	
	11/13	Bolted joints design: thread standards, static and fatigue analysis, bolted joints in tensile and shear loads (15) MD preload and torque	Homework #7 Fatigue failure Due Mon. Nov. 13
14	11/18	Fatigue problems, Exam Review	
	11/20	Exam 2, Mon. Nov. 20 – Topics; stress analysis, column, cylinder, yielding and fatigue (MD)	
15	11/25	Bolted joint design, exam review	
	12/27	Holiday - Thanksgiving Wed. (11/27), Th. (11/28) and Friday (11/29)	
16	12/2	Design project presentations: groups 1, 2, 3, 4	
	12/4	Design project presentations: groups 5, 6, 7, 8	
17	12/9	Design project demo 10:30-12:10, project report is due at the demo, late reports will not be accepted Monday - Last day of instruction
